Value Project

Composable value types, explicit scalar conversions, automatic parsing and value inspection

Anonymous · 15/11/2026 · #php

Derafu Value

Pages in this section

- **Introduction** — Validate, convert, interpret and inspect PHP values with explicit contracts
- **Casting** — Read scalar values and objects strictly or convert scalars explicitly, with nullable and required read methods
- **Parsing** — Interpret scalar text and preserve numeric format or significant decimal precision when requested
- **Types** — Compose strict validation, scalar conversion, collections, enums, dates and custom types
- **Inspection** — Inspect blank values without coercion, whitespace normalization or recursive traversal
- **Exceptions and Translations** — Catch typed value failures, preserve their causes and translate package exceptions
