-------------	-----	-----------	----------	-------------	---	-----------	--------	-----------	----------------

A PHP repository for global enumerations.

Note on Enumerations

While this package provides a basic set of enumerations for specific use cases, it is highly recommended to consider using [PrinsFrank/standards](#) for more comprehensive enumeration needs. The PrinsFrank/standards package offers:

- A more extensive collection of standardized enumerations.
- Regular updates based on international standards.
- Better maintained and widely adopted in the PHP community.
- More robust validation and type-safety features.

This package (derafu/enum) should be considered primarily for very specific use cases where the more comprehensive solution might be unnecessary or when you need custom enumerations not covered by standard libraries.

Installation

You can install the package via composer:

```
composer require derafu/enum
```
