Platform Bundle

Pages in this section

- **Introduction** — What this bundle does, its modules, architecture, and mental model.
- **Features** — Everything the bundle provides, grouped by module.
- **Installation** — Install the bundle, create entities, configure services, and run migrations.
- **Configuration reference** — Full YAML config reference for all bundle modules.
- **Entities** — MappedSuperclass pattern, entity map, fields, and extending.
- **User lifecycle** — Registration, email verification, password reset, email change, and more.
- **Organizations & invitations** — Multi-tenant orgs, memberships, teams, invitations, and context.
- **Authorization (RBAC)** — Cascading RBAC: global, organization, team, and resource voters.
- **Multi-tenancy & RLS** — Row-level security with automatic Doctrine filtering by tenant.
- **API keys** — Long-lived tokens for programmatic access with optional scopes.
- **Identity UI** — Built-in web UI for authentication and account management.
- **Apps (plugin system)** — Plugin/integration ecosystem with per-user, per-organization, and per-resource installations.
- **Notifications** — Event-driven notifications via email, in-app messages, and webhooks.
- **Integration with app resources** — Traits and interfaces to plug app entities into identity, RBAC, and tenancy.
- **Events** — All dispatched events and how to subscribe to them.
