Requirements

The `derafu/form` and `derafu/data-processor` packages installed and configured in `services.yaml`.

Check the configuration in the [website skeleton](#).

Quick Start

Install the package:

```
composer require derafu/contact-form
```

Import the routes to your `routes.yaml`:

```
imports:
  - { resource: '../vendor/derafu/contact-form/resources/config/contact-form-routes.yaml' }
```

Import the services to your `services.yaml`:

```
imports:
  - { resource: '../vendor/derafu/contact-form/resources/config/contact-form-services.yaml' }
```

Copy the `templates/contact/index.html.twig` and `templates/contact/success.html.twig` to your project.

If you want to use the default templates (and not copy them), add the templates path to your service configuration:

```
Derafu\Renderer\Contract\RendererInterface:
  factory: ['Derafu\Renderer\Factory\RendererFactory', 'create']
  lazy: true
  arguments:
    $options:
      paths:
        - '%kernel.project_dir%/vendor/derafu/contact-
form/resources/templates'
```

Configure the environment variables:

```
# Source of the form for identifying it in the webhook.
# Useful for multiple forms in the same webhook.
FORM_CONTACT_SOURCE=derafu.dev

# URL and secret key for processing the contact form.
# Get the URL from the webhook service you are using.
# The secret key will be used to sign the payload using HMAC.
FORM_CONTACT_WEBHOOK_URL=
FORM_CONTACT_WEBHOOK_SECRET_KEY=

# Site and secret key for protect forms with captcha.
# Get the keys from https://www.hcaptcha.com/
CAPTCHA_SITE_KEY=
CAPTCHA_SECRET_KEY=
```
