Content Project

Where knowledge becomes product

Anonymous · 09/09/2026 · #php

Where knowledge becomes product

Pages in this section

- **Introduction** — What derafu/content is and how its plugins fit together.
- **Content Frontmatter** — The YAML frontmatter fields shared by every content type (Academy, Blog, Docs, FAQ, Pages).
- **Academy Plugin** — Course management, with a course → module → lesson hierarchy.
- **Blog Plugin** — Blog management, with archive, tags and an RSS feed.
- **Docs Plugin** — Documentation management, with a sidebar and nested sections.
- **FAQ Plugin** — FAQ management, with nested sections and a sidebar.
- **Pages Plugin** — Standalone pages management, rendered as HTML, Markdown, PDF or JSON.
- **PDF and Markdown Export** — What the PDF and Markdown exports add on top of the raw content, and how to bundle a whole section into one file.
- **API Plugin** — Bulk JSON export of the content, meant for external indexing/RAG pipelines.
- **Sitemap Plugin** — XML sitemap of every indexable content item, for search engines.
- **MCP Plugin** — Exposes the content as an MCP (Model Context Protocol) server for AI agents.
- **Search Plugin** — Search engine integration, with an optional LLM-based conversational answer.
- **Storage Plugin** — Attachment storage and download management for any content type.
- **Content Cache** — What the built-in content cache does and does not speed up, and how to swap its backend.
